

VIGILSHORE™

Protecting Client Payments and Financial Information

At VIGILSHORE, the security of your **financial information** and **payment details** is of utmost importance. We take the necessary precautions to ensure your data is protected throughout the entire transaction process:

1. Secure Payment Platforms

- a. We only work with **trusted and secure payment platforms** such as **Stripe, PayPal**, and others that offer **strong encryption** and **fraud prevention** systems to protect your financial details during transactions.
- b. These platforms follow industry-standard security protocols to ensure your payments are processed safely and efficiently.

2. Locked Pages and Internal Safeguards

- a. Client payments and financial information are handled through **secure, locked pages** on our website. These pages are protected with **SSL encryption** to ensure that all communication between your browser and our site is encrypted and private.
- b. We also implement **internal safeguards**, limiting access to sensitive financial data to only **authorized personnel** within the company. This minimizes the risk of unauthorized access to your information.
